No, we're talking about the command line, the command line being the mother of all systems. It's like the best friend of all users who, throughout the ages, have been able to see their eyes turn blue in the middle of the night, then return to their normal color when their blood pressure dropped. It's the gentleman who, without hesitation, has taken on any task. The man who, despite falling off of his roof (or actually, because of that), has just started climbing that one tower of four, then jumped to the other side, then started to climb the other tower... In the past, we've seen the command line take a backseat. However, with the advent of the more powerful cloud services, the command line is now the tool of the future. A Simple Introduction to the Command Line The command line is simple. Yes, simple. Like, your mom would say: the command line is great because it's the most basic of all. With just the command line, you can do an awful lot. Of course, you need the extra tools such as an operating system, text editors, graphics-editing tools, networking and servers, etc., but the command line is the core of the system. A quick example will help you understand the command line: you open an application. The desktop moves. You open another application. The desktop moves. You open an editor. Then, you edit a document. Then, the desktop moves. You send that document to a specific printer. The desktop moves. If you were the CEO of a company, 09e8f5149f
