To provide a cooling slot in a backup tool such as a platen or tape clamping device, the base is usually provided with holes or grooves to permit cooling air to flow therethrough. However, such holes or grooves only permit a limited passage of cooling air and generate secondary air pressure which is detrimental to the smooth operation of the disc drive head stack. Thus, such a backup tool is not capable of providing a consistent, controlled flow of coolant under a relatively high flow of air. Further, such holes or grooves in the base also tend to enlarge the resultant tool, as well as to impair the rigidity of the base. The present invention is directed to solving these problems by providing a cooler in which the base is relatively stiff and the removal of heat from the base is a relatively efficient process.
