I RAN INTO THE SAME PROBLEM, WATCHED MANY VIDEOS ON HOW TO FIX IT WITH DXCPL, BUT ... (I'm using Win 8). I am using Unity3D. I have a project in Unity and a project (embedded project) in Visual Studio. I created a new project, deleted everything from the new project and added a DLL (which I found on the website) to my project. But after that, all I want to do is drag the new project to the "Additional Projects" panel in Unity3D, and it can't compile either. I get the following error message: "com.apple.appkit.ui.utils.util.UnitInfo" DLL could not be loaded.
